

Tree-culture Management

Tree-culture provides an innovative, low-cost, positive-environmental-impact solution that can be quickly implemented, for a healthier and more fire resistant landscape.

(Before)

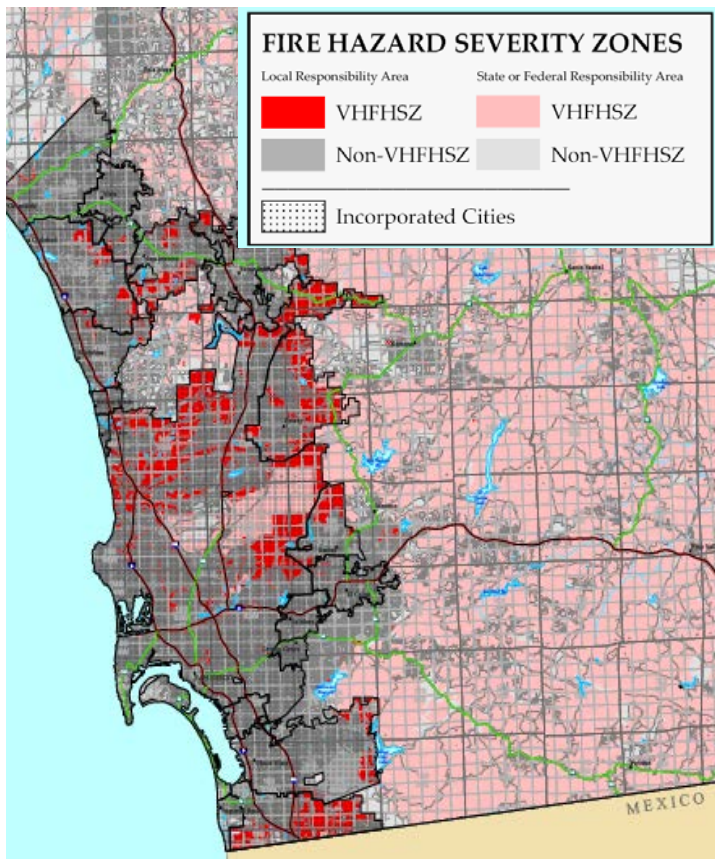

(After)

CAL-Fire explains that its area classification is based on “*models of potential fuels over a 30-50 year time horizon*”. Tree-culture management will disrupt

the fuel loading geometry.

**Catastrophic wildfires
Should not be
an accepted norm.**

San Diego County 2001-2010:
**715,898 Acres burned and
Over \$1,200,000,000 in Property
damage**

Including:

10/25/03 – Cedar Fire burned
143,734 acre and 4,847 structures
10/21/07 – Witch Fire burned
197,990 acres and 1,650 structures

This trend will worsen barring intelligent action
